Supporting our customers in **Biosafety management and Biotechnology regulatory challenges.**

When working with pathogenes, infectious substances or GMOs, there are important matters that you should keep in mind: safety for staff and the environment, security for valuable material, proper containment infrastructure, necessary work procedures, and applicable permits.

In order to comply with them in a cost-effective way, Perseus provides a range of solutions adapted to your specific needs.

REGULATORY

Regulatory Assessment
Regulatory Planning
Regulatory Support

RISK ASSESSMENT

Performing risk assessments
Setting up risk
assessment procedures

RISK MANAGEMENT

Select protective infrastructure & equipment
Develop work procedures & manuals
Set up validation

MONITORING

Design monitoring programmes
Perform monitoring
Develop post-market monitoring plan

TRANSPORT

Identify relevant transport regulations
Obtain necessary permits
Guide packaging & documentation

TRAINING

Providing training courses tailored to needs
Implementation of training plan

AUDITS

Compliance, performance or system audits

COMMUNICATION

Development of key-messages and
communication plan
Crisis communication

RESEARCH, REPORTS & WORKSHOPS

Partner in research projects
Studies on biosafety & biotech aspects
Organization of related events

EMERGENCIES AND ISSUES

Design and implementation of emergency
preparedness plan
Business contingency planning
Incident investigation

Established in 2003, PERSEUS bvba is a partnership of **biosafety** and **regulatory experts** from diverse fields of application.

- Personal experience in the safe use of biologicals, genetically modified or not.
- Specialized regulatory know-how, developed over nearly 25 years.
- Worldwide contact network in the full spectrum of biosafety-related disciplines.

- Proven track record on efficient facility design and management of biological safety in up to containment level 3 facilities.
- Extensive expertise on genetically modified material in containment and all other phases (e.g. field trials, clinical trials, commercial applications, movement of materials and imports, international trade).
- Successful projects in different sectors (agri-food, health, industrial) and with different stakeholders (authorities, industry, academia).

- Insight on corporate and European political demands.
- Personalized project approach with clear timelines, objectives and cost allocation. Services can be complementary to corporate efforts or provide a complete cost-effective solution.
- A gateway to Europe: registered in Belgium, embedded in one of Europe's most active Life Science regions, close to the European Commission's administrative centres.
